

# RFvision-2 EXT Nx500 MHz Spectrum Staring & Real-Time Recording

Multiple DTA-9590 tunable RF receivers (each with 500 MHz stare BW & 0.5 – 18 GHz frequency range) are connected to one or more RAID servers via the 10 gigabit networks to increase the stare BW. The scan time is also reduced. For example, to achieve a 4 GHz stare BW, 8 DTA-9590 receivers are used. All 8 channel data can be recorded in real-time, alternately any one or more receiver output(s) can be recorded. Contact factory for more information.
