

RFvision-360: Gapless Spectrum Monitoring From 1 MHz To 18 GHz

RFvision-360 For Simultaneous COMINT & ELINT Processing

RFvision-360 (5U system) provides simultaneous coverage of HF, VHF/UHF & SHF bands with programmable scan bandwidths from a few MHz to 40 MHz for communication signals and up to 500 MHz for radar signals. Baseband I & Q data from any or all 3 selected bands can be recorded in real time at full bandwidths (40 MHz for HF & V/UHF bands & 500 MHz for the radar bands). Replicated 10 GbE ports provide user access to data being recorded for simultaneous processing while recording. The SigInspector™ software provides convenient navigation & control for frequency scanning, activity selection, recording and file transfer using multiple displays.
